Dear course participants,

the task sheet for Lab 2 is available in ILIAS, so you can start working on it!

Due to some issues with the provisioning of the GNS3-server instances, some of you might expect some problems with the available router.
If your router is named C3600, you need to change the configuration of this template.

Do a right-click on this template and choose "Configure template".
Choose the tab "Slots" and add the NM-16ESW module to slot0.

The other slots do not need any adapter.
After this, your template is fixed and provides the correct configuration.
If you have started with the lab, you can repeat the steps and the inserted routers or replace them with the "new" template.

Until then, good luck in the lab,
Your CCN-Team
